

LEAF

Learn biodiversity through
Environmental Action for the Community

leaf

The main aim of this project is to leverage the “service learning” and “citizen science” methodologies and apply them to secondary schools, with the goal of engaging students in the monitoring of local plant biodiversity.

LEAF will contribute to environmental and climate goals for the sake of the communities involved as well as to supporting teachers, school leaders and other teaching professions in their development of key competences.

What do we expect?

- Engage secondary schools in the monitoring and protection of plant biodiversity, providing a service to their community while taking their learning from theory to practice.
- Transformation of schools into “open learning organizations”, well integrated with their community and holding regular exchange with local stakeholders.

Partnership
